LIVESTOCK DISEASE FOREWARNING BULLETIN- November 2018

(SIMPLIFIED SOLUTION! MAGNIFIED OPPORTUNITY!)

Published By: Director
ICAR-NIVEDI

©ICAR-NIVEDI

Data compilation by: Dr. M. Nagalingam

Dr. Siju Susan Jacob

Prepared By: Dr. K. P. Suresh
Dr. Divakar Hemadri
Dr. S.S. Patil

Disclaimer

The forewarnings are based on the retrospective disease data available in the NADRES database. Hence, for those states wherein data is limited/less, the forewarning may not be realistic. Further the forewarning will not take into consideration the control measures that are *in situ*.

Acknowledgement

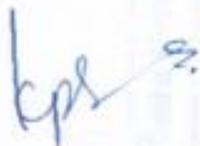

We would like to acknowledge the constant support and inspiration from honourable Secretary, DARE & DG, ICAR, Government of India, New Delhi.

We would like to express sincere everlasting gratitude to honourable Deputy Director-General (Animal Science) for his constant encouragement and guidance.

We would also like to express sincere gratitude to Department of Animal Husbandry, Dairying and Fisheries, Government of India for providing the livestock population data for preparation of this bulletin.

Animal Husbandry Departments of state governments and also AICRP on ADMAS centers are gratefully acknowledged for the timely report of disease outbreak data. We are thankful to all the scientific and technical staff of ICAR-NIVEDI for their feedback and support.

Furthermore, we would also like to acknowledge with much appreciation, the crucial role of Scientists Dr. M. Nagalingam and Dr. Siju Susan Jacob and SRF/YP Dheeraj R, Rashmi R. Kurli, Mainak mondal, Kiran Kumar S and Charitha J. in preparation of this report.

Dr. K. P. Suresh

Dr. Divakar Hemadri

Dr. S.S. Patil

(Dr. B. R. Shome)
Principal Scientist & Director (Acting)
ICAR-NIVEDI.

1. About the bulletin...

Livestock sector also plays a critical role in the welfare of India's rural population. This enterprise provides a flow of essential food products, draught power, manure, employment, income, and export earnings. As it is an important component in poverty alleviation programmes, continuous emphasis is being laid on this sector for enhancing the quality of the primary and secondary products in international market, which in turn demands safe animal health for better products. Therefore, livestock development programmes cannot succeed unless a well-organized animal health service is built up and protection of livestock against diseases and pests particularly against the deadly infections is assured.

India has achieved eradication of rinderpest (RP), CBPP, AHS and Dourine. However, there are several other infectious and non-infectious diseases prevailing in the country causing huge economic loss annually. Prevention, control and eradication of the animal diseases need a thorough understanding of the epidemiology as well their economic impact.

National Institute of Veterinary Epidemiology and Disease Informatics (NIVEDI) has the mandate to carry out research activities in the area of veterinary epidemiology and disease informatics. With the eradication of RP successfully, India has not only proved its ability to face the challenges, but also to succeed, despite various limitations. Similar efforts are needed to control and eradicate the diseases like FMD, PPR, Brucellosis, CSF, BT, HS etc., which cause huge economic loss annually to the livestock industry. To this end, ICAR-NIVEDI has identified 13 priority diseases, based on the past incidence patterns and has built a strong database of these diseases. The database, which is backbone of the National Animal Disease Referral Expert System (NADRES), is used for providing monthly livestock disease forewarning, which is compiled in this monthly bulletin to alert the animal husbandry departments, both at the National/state level, to take appropriate control measures. We hope users/stakeholders find this bulletin useful in their quest to control livestock diseases.

After realising the difficulties in implementing the forewarning results at district level and also considering the importance of forewarning at block level, ICAR-NIVEDI attempted to develop models for predictive analytics at block levels. Similar risk factors like Meteorological and remote sensing variables were used for forewarning at block level. We started providing the forewarning results for Karnataka state on Foot & Mouth disease, Black quarter, HS and PPR on pilot basis.

2. Forewarning Methodology

I) Materials.

Livestock disease data

Previous 10 years livestock disease outbreak data retrieved from the NADRES database linked with Risk factors data.

Livestock population data

District wise livestock population data from 19th Livestock census (2012)

Meteorological data

Variables such as precipitation (mm/month), pressure (millibar), relative humidity(%), sea level pressure(millibar), minimum temperature ($^{\circ}\text{C}$), maximum temperature($^{\circ}\text{C}$), wind speed(m/s), vapour pressure (hPa), soil moisture(%), perceptible water(mm), potential evaporation transpiration(mm/day) and cloud (%) were extracted from NCEP-National centre environmental prediction/IMD-Indian meteorological Database/NICRA-National Innovation Climate Resilient Agriculture and other sources for the past five years. Monthly average for the past five years have been calculated and used.

Remote sensing data

Remote sensing variables such as NDVI-Normalised difference vegetation index, EVI- Enhanced vegetation indexand LST - Land surface temperature were calculated using MODIS LANDSAT/IRS satellite images for the past five years. Monthly average for the past five years have been calculated and used. Details of the parameters are tabulated below.

| SDS Layer Name | Resolution | Description | Units | Data Type | Scaling Factor |
|-------------------|------------|------------------------------|--|-------------------------|----------------|
| 500m_16_days_NDVI | 500 sq. m | 16 day NDVI average | NDVI | 16-bit signed integer | 0.0001 |
| 500m_16_days_EVI | 500 sq. m | 16 day EVI average | EVI | 16-bit signed integer | 0.0001 |
| LST_Day_1km | 1 sq. km | Day Land Surface Temperature | Kelvin | 16-bit unsinged integer | 0.02 |
| Lai_1km | 1 sq. km | Leaf Area Index | m ² plant/m ² ground | 8-bit unsigned integer | 0.1 |

II) Method.

Disease outbreak was predicted by combining predicted results from Generalised Linear Model (Logistic Regression), Gradient Boosting and Random Forestmodels to form the master chart containing the above parameters using a R programme and the probability of disease outbreak was categorised in 6 risk levels- No risk (NR), Very low risk (V), Low risk (), Moderate risk (MR), High risk (HR) and Very high risk (VHR) for enabling the stake holders to take appropriate control measures by suitably allocating available resources.

Given below is the probability distribution of risk interpretations.

| S. No. | Probability of risk | Interpretation |
|--------|---------------------|-------------------------------|
| 1 | 0 | No risk/No or inadequate data |
| 2 | 0-0.20 | Very low risk |
| 3 | 0.21-0.40 | Low risk |
| 4 | 0.41-0.60 | Moderate risk |
| 5 | 0.61-0.80 | High risk |
| 6 | 0.8-1.0 | Very high risk |

3. Accuracy of Prediction.

| Serial No. | Diseases | Accuracy (%) |
|------------|----------------------------|--------------|
| 1. | Anthrax | 96.60 |
| 2. | Babesiosis | 97.99 |
| 3. | Black Quarter | 93.83 |
| 4. | Bluetongue | 99.84 |
| 5. | Enterotoxemia | 97.38 |
| 6. | Fasciolosis | 95.98 |
| 7. | Foot and mouth disease | 87.80 |
| 8. | Haemorrhagic septicaemia | 93.20 |
| 9. | Peste des petits ruminants | 92.28 |
| 10. | Sheep & Goat pox | 94.91 |
| 11. | Swine fever | 94.45 |
| 12. | Theileriosis | 96.45 |
| 13. | Trypanosomosis | 98.15 |

- **Formula Used:** The Accuracy of disease prediction was calculated using the following formula.

$$\frac{TP + TN}{Total} * 100$$

TP-True Positive Observations, TN-True Negative Observations, Total- Total observations.

- Internal Accuracy was performed using 10 years of data. Accuracy obtained was > 90% for all the diseases predicted except Foot and mouth disease (87.80%).

4. Forewarning of livestock disease for the month of November 2018

i) District wise Livestock Disease forewarning:

District wise Livestock Disease forewarning for November 2018: Andaman and Nicobar

| Districts of Andaman and Nicobar | Livestock Diseases | | | | | | | | | | | | |

*Number of predicted disease incidence was summarised considering only High risk and Very high risk (+HR)

Andaman and Nicobar

A total of 3 districts in Andaman and Nicobar in which one district i.e. Nicobars is prone to Fasciolosis disease.

Andhra Pradesh

A total of 13 districts in Andhra Pradesh are likely to report the major 3 livestock diseases. i.e., Anthrax, Bluetongue and Haemorrhagic Septicaemia in which 2 districts are prone to Anthrax. One district i.e., Prakasam is prone to Bluetongue and Anantapur district is likely to have Haemorrhagic Septicaemia.

Assam

A total of 27 districts from Assam are likely to report 5 livestock diseases i.e. Black Quarter, Fasciolosis, Peste des petits ruminants, Sheep & Goat Pox and Swine Fever, in which 9 districts are prone to Fasciolosis. 7 districts are likely to have Swine Fever. 5 districts are prone to Black Quarter. Peste des petits ruminants is predicted in 2 districts and 1 district i.e., Jorhat is prone to Sheep & Goat Pox disease.

Bihar

A total of 38 districts from Bihar are likely to report 3 diseases i.e. Babesiosis, Foot and Mouth disease and Trypanosomosis in which 2 districts are prone to Babesiosis and Trypanosomosis is likely to occur in 2 districts. 1 district i.e., Patna is prone to Foot and Mouth disease.

Gujarat

A total of 26 districts from Gujarat in which 2 districts i.e., Junagadh and Rajkot are likely to report Peste des petits ruminants.

Himachal Pradesh

A total of 12 districts from Himachal Pradesh in which only one district i.e. Kinnaur is likely to report Sheep & Goat Pox disease.

Jammu and Kashmir

A total of 22 districts in Jammu and Kashmir are likely to report 1 disease i.e., Sheep & Goat pox in 7 districts.

Jharkhand

A total of 24 districts in Jharkhand are likely to report 7 diseases i.e., Babesiosis, Black Quarter, Fasciolosis, Foot and Mouth disease, Peste de pestis ruminants, Theileriosis and Trypanosomosis. Babesiosis and Trypanosomosis are predicted in 22 districts and 21 districts are likely to have Fasciolosis. Theileriosis is likely to occur in 20 districts. 8 and 6 districts are prone to have Foot and Mouth disease and Peste de pestis ruminants respectively. Black Quarter is found to prone in Lohardaga district.

Karnataka

A total of 30 districts in Karnataka are likely to report 10 diseases i.e. Anthrax, Black Quarter, Bluetongue, Enterotoxemia, Foot and Mouth disease, Haemorrhagic Septicaemia, Peste de pestis ruminants, Sheep & Goat pox, Swine fever and Theileriosis. 11 districts are prone to Haemorrhagic Septicaemia. 10 districts are prone to both Bluetongue and Foot and Mouth disease. Black Quarter and Enterotoxemia are likely to occur in 8 districts. 5 districts are prone to Anthrax and 4 districts are predicted for Sheep & Goat pox disease. Peste de pestis ruminants and Theileriosis diseases are likely to report in 2 districts. Swine fever is predicted in Bangalore district.

Kerala

A total of 14 districts in Kerala are likely to report 2 diseases i.e., Foot & Mouth disease and Swine Fever. 13 districts are prone to Foot & Mouth disease. Swine Fever is likely to occur in 2 districts.

Madhya Pradesh

A total 50 districts in Madhya Pradesh are likely to report 1 disease i.e. Haemorrhagic Septicaemia in one district i.e. Betul district.

Maharashtra

A total of 35 districts in Maharashtra are likely to report 3 major livestock disease i.e., Black Quarter, Haemorrhagic Septicaemia and Peste de pestis ruminants. 2 districts are prone to Haemorrhagic Septicaemia. Ahmadnagar district is predicted for both Black Quarter and Peste de pestis ruminants diseases.

Manipur

A total of 9 districts in Manipur are likely to report 2 major livestock disease i.e., Fasciolosis and Swine Fever. 6 districts are prone to Swine Fever and 4 districts are prone to Fasciolosis.

Meghalaya

A total of 11 districts in Meghalaya are likely to report 3 disease i.e., Black Quarter, Foot and Mouth disease and Swine Fever. Black Quarter and Swine Fever are predicted to occur in 2 districts and West Khasi Hills is likely to report Foot and Mouth disease.

Mizoram

ICAR

A total of 8 districts in Meghalaya are likely to report 1 disease i.e. Swine Fever in Champhai district.

Nagaland

A total of 11 districts in Nagaland of which 5 districts are likely to report Swine Fever.

Odisha

A total of 29 districts in Orissa are likely to report 5 diseases i.e. Babesiosis, Black Quarter, Foot and Mouth Disease, Haemorrhagic Septicaemia and Peste de pestis ruminants. 5 districts are likely to have Black Quarter and 2 districts are prone for Peste de pestis ruminants. Khordha district is likely to have Babesiosis. Black Quarter and Theileriosis. Foot and Mouth Disease, Haemorrhagic Septicaemia are likely to occur in Mayurbhanj district.

Puducherry

A total of 4 districts in Puducherry are likely to have 5 diseases in which 3 districts are prone to Babesiosis and 2 districts are likely to report Fasciolosis disease. Karaikal district is prone to Foot and Mouth Disease. Haemorrhagic Septicaemia and Sheep & Goat Pox are reported to occur in Puducherry district.

Punjab

A total of 20 districts in Punjab are likely to have Theileriosis disease in 2 districts i.e. Gurdaspur and Ludhiana districts.

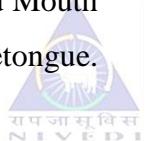

Rajasthan

A total of 32 districts in Rajasthan are likely to report 2 diseases i.e. Foot and Mouth Disease, and Trypanosomosis. 2 districts has a threat for Foot and Mouth Disease and Udaipur district is reported have Trypanosomosis disease.

Tamil Nadu

A total of 31 districts in Tamil Nadu are likely to report 4 diseases i.e., Anthrax, Bluetongue, Foot and Mouth Disease and Peste des petits ruminants. 22 districts are likely to have Foot and Mouth Disease. Anthrax is predicted for 8 districts while 2 districts are likely to have Bluetongue.

Virudhunagar is the district likely to have Peste des petits ruminants disease.

Telangana

A total of 10 districts in Telangana are likely report the major 2 livestock disease i.e. Bluetongue and Haemorrhagic Septicaemia. 4 districts are prone to Bluetongue 1 district i.e. Mahbubnagar is prone to Haemorrhagic Septicaemia.

Tripura

Dhalai, North Tripura, South Tripura and West Tripura are likely to report 6 diseases i.e. Babesiosis, Black Quarter, Fasciolosis, Foot and Mouth disease, Sheep & Goat pox and Swine Fever. Foot and Mouth disease and Swine Fever are likely to occur in 4 districts. 2 districts are prone to Babesiosis and Fasciolosis. South Tripura is likely to have Black Quarter and West Tripura is prone to Sheep & Goat pox.

Uttar Pradesh

A total of 83 districts in Uttar Pradesh likely to report 3 major livestock diseases i.e., Fasciolosis, Theileriosis and Trypanosomosis. 3 districts are prone to Trypanosomosis. 2 districts are likely to have Theileriosis and Ballia district is prone to Fasciolosis.

West Bengal

A total of 19 districts in West Bengal are likely to report 9 diseases i.e., Anthrax, Babesiosis, Black Quarter, Foot and Mouth Disease, Haemorrhagic Septicaemia, Peste des petits ruminants, Sheep & Goat pox, Theileriosis and Trypanosomosis. 10 districts are prone to Foot and Mouth Disease. Peste des petits ruminants is a threat for 9 districts. 6 districts are prone to Theileriosis. Black Quarter and Haemorrhagic Septicaemia are likely to have in 3 districts. Babesiosis and Sheep & Goat pox are likely to prone in 2 districts. Murshidabad and Birbhum are the districts prone to Anthrax and Trypanosomosis respectively.

iii) Diseases, Species affected, clinical signs and its preventive measures.

| Sl No. | Disease | Species Affected | Clinical Signs | Preventive Measures |
|--------|--------------------|--|---|--|
| 1 | Anthrax | Most of the mammals and ruminants are highly susceptible. Pigs and Horses are moderately susceptible. Carnivores are relatively resistant. | Convulsion and sudden death with oozing of blood from natural orifices such as rectum and nose prior to death. Occasionally oedema develops in the throat and shoulder over a period of one week before death. | Ring vaccination and report of disease is advised. Vaccination to be done in consultation with the veterinarians and as decided by state animal husbandry authorities. Strict biosecurity measures May be followed. Carcass May be disposed by deep burying covered with lime powder. Contaminated area May be disinfected with 4% formalin or 10% caustic soda. Grazing area May be restricted. |
| 2 | Babesiosis | Cattle. Cross breeds are more susceptible. | High temperature, jaundice like symptoms, yellowish mucosal membrane of eye, rectum and coffee colour urine. | Periodical application of acaricides in and around the animal shed and on the animals. For therapeutic application, di-aminizine or imidocarb can be useful. |
| 3. | Black Quarter (BQ) | Common disease for cattle and sheep but occasionally goats and pigs also suffer from the disease. | High fever and lameness followed by swelling in the neck, shoulder, lumbar, gluteal and sacral regions. Skin over the affected area become dark and crepitant on palpation. Loss of feed intake, colic, lateral recumbency, dyspnoea and death. | Affected animals May be treated with suitable antibiotics. Vaccination to be done in consultation with the veterinarians and as decided by state animal husbandry authorities. Strict biosecurity measures May be followed. Grazing area May be restricted. Carcass May be disposed hygienically. |
| 4. | Bluetongue(BT) | Sheep are more susceptible than goats. | Fever, swelling of face, neck, eyelids respiratory distress, nasal discharge, Salivation, necrotic ulcers on tongue, dental pad, gum, lips hyperaemia of muzzle and May bleed at muco-cutaneous junction. Affected tongue May become swollen, | Vector control using insecticides and good water management. Vaccination of susceptible animals preferably in the month of May. Do not shear sheep during winter months. Restriction in |

| | | | | |
|----|-----------------------------|--|---|---|
| | | | cyanotic and purple blue in colour – ‘blue tongue’. | animal movement, segregation of affected animals and symptomatic treatment. Strict bio security measures. |
| 5. | Enterotoxemia (ET) | Common disease of sheep and goats especially among the young animals. | Dullness, opisthotonus, convulsions, coma and sudden death. Affected adult sheep, which survive for several days May show diarrhoea and staggering. | Affected animals May be treated with suitable antibiotics. Vaccination to be done in consultation with the veterinarians and as decided by state animal husbandry authorities. Strict biosecurity measures May be followed. Carcass May be disposed hygienically. Grazing area to be restricted, stall fed, vitamins and probiotics May be provided. |
| 6. | Fasciolosis | Cattle, buffalo, sheep and goats. | Progressive anaemia, pale mucous membrane, sub-mandibular oedema (Bottle jaw), loss of appetite, weakness in movement, isolated from flock while grazing, loss in production. | The animal should not be allowed to graze in water stagnant field or submerged fodder should not be given directly to the animals. The sub-merged fodder can be processed through hay/silage preparation, where metacercaria will die through the process. The affected animals can be treated by Carbon tetrachloride/ Rafoxanide /Nitroxynil/ Niclofolan /Closantel/Oxyclozanide, under Veterinarian & under strictsupervision. |
| 7. | Foot and Mouth Disease(FMD) | Cattle, buffalo, sheep, goats and pigs are often affected domesticated species, but the disease is more severe in cattle and pigs. | Fever, loss of feed intake, drop in milk production, drooling of saliva like ropey string, vesicles develop on the tongue, lips, gums, and palate and eventually rupture. Concurrent to oral lesions, vesicles also appear in inter digital skin and coronary band of the feet. The animal May open and close its mouth | Regular vaccination and seromonitoring. Disinfection with sodium carbonate (4%) or 10% washing soda and strict biosecurity measures to be followed and animal movement May be controlled. |

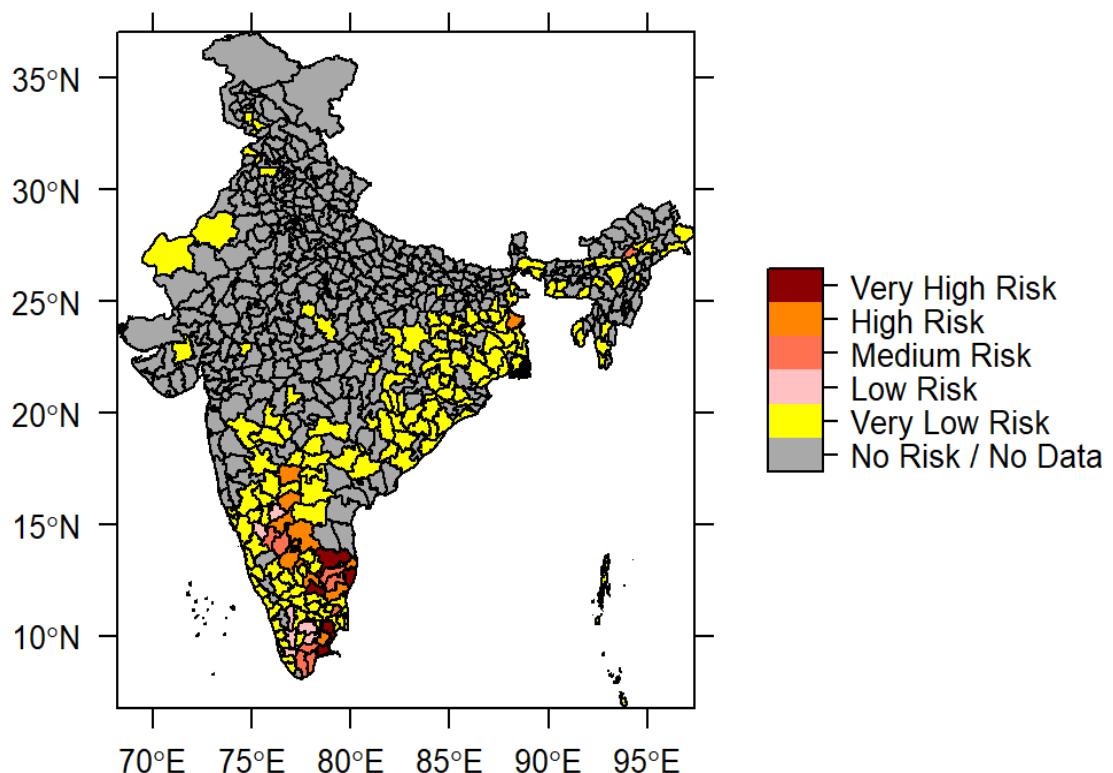

| | | | | |
|-----|---------------------------------|--|---|--|
| | | | with a characteristic smacking sound. Sheep and goats May show lameness. In pigs, lesions May be seen on snout and also on the feet. | |
| 8. | Haemorrhagic septicaemia (HS) | Common disease for cattle and buffaloes but also occur among other species such as pigs, sheep, goats and many wild animals. | The disease starts with high fever, respiratory distress and haemorrhages maybe seen on the mucous membranes. There is lacrymation, nasal discharge, drop in milk production and anorexia. As the disease progress ear droop, animals are prostrated with cyanosis of mucous membranes. There May be oedema along the head, neck, thorax, vulva and anal areas. Sudden death occurs within few hours of clinical signs. | Affected animals May be treated with suitable antibiotics. Vaccination to be done in consultation with the veterinarians and as decided by state animal husbandry authorities. Strict biosecurity measures May be followed. Carcass May be disposed hygienically and stress factors May be reduced by good animal husbandry practices. |
| 9. | Peste des Petits Ruminants(PPR) | Goats and sheep are most affected domestic animals. | Fever, nasal and ocular discharge, respiratory distress, necrotic lesions in buccal mucosa, gum, dental pad, palate, tongue and diarrhoea. Animals May die because of dehydration and pneumonia. | Vaccination of susceptible animals of above 3 months old age. Restriction on animal movement, strict biosecurity measures and proper disposal of carcass. |
| 10. | Sheep & Goat pox (S & G pox) | Sheep and Goats | Respiratory distress and pock lesions over the non-hairy parts of body, more common in teat, udder, scrotum, head, neck, ear, perineum, inner aspect of thighs and under tail. | Vaccination of susceptible animals of above 3 months old age. Symptomatic treatment of affected animals. Restriction on animal movement, strict biosecurity measures and proper disposal of carcass. |
| 11. | Swine Fever(SF) | Pigs | Fever, Conjunctivitis, purplish discolouration of snout, ears, abdomen, inner side of the legs and staggering gait. | Vaccination of susceptible animals. Restriction on animal movement, strict biosecurity measures and proper disposal of carcass |
| 12. | Theileriosis | Large Ruminants. Cross bred cattle are more vulnerable. | High temperature, yellowish eye, sometime eye May be heavily swollen, icteric mucosal membrane of rectum, dark yellowish urine, | Periodical application of acaricides in and around the animal shed and on the animals. Vaccination in endemic areas with |

| | | | | |
|-----|----------------|---|--|--|
| | | | sometime May reach to coffee colour. Antibiotic is of no use to check fever. | <i>Theileria annulata</i> schizont cell culture vaccine. Therapeutic application of buparvaquone can be useful in both early and advanced stages of the infection. |
| 13. | Trypanosomosis | Domestic and wild carnivores and herbivores including cattle, buffalo, horse, donkey, camel, dog and cats. Buffaloes are known as carriers. | Fluctuating high fever which is not responded by antibiotic, swollen lymph gland, chronic emaciation and weakness, loss of appetite, gradual loss of production. | The affected animal should be treated with diaminazine compounds or chloride and sulphate salts of quinapyramine. Periodical spray of insecticide in and around animal shed to remove the flies. |

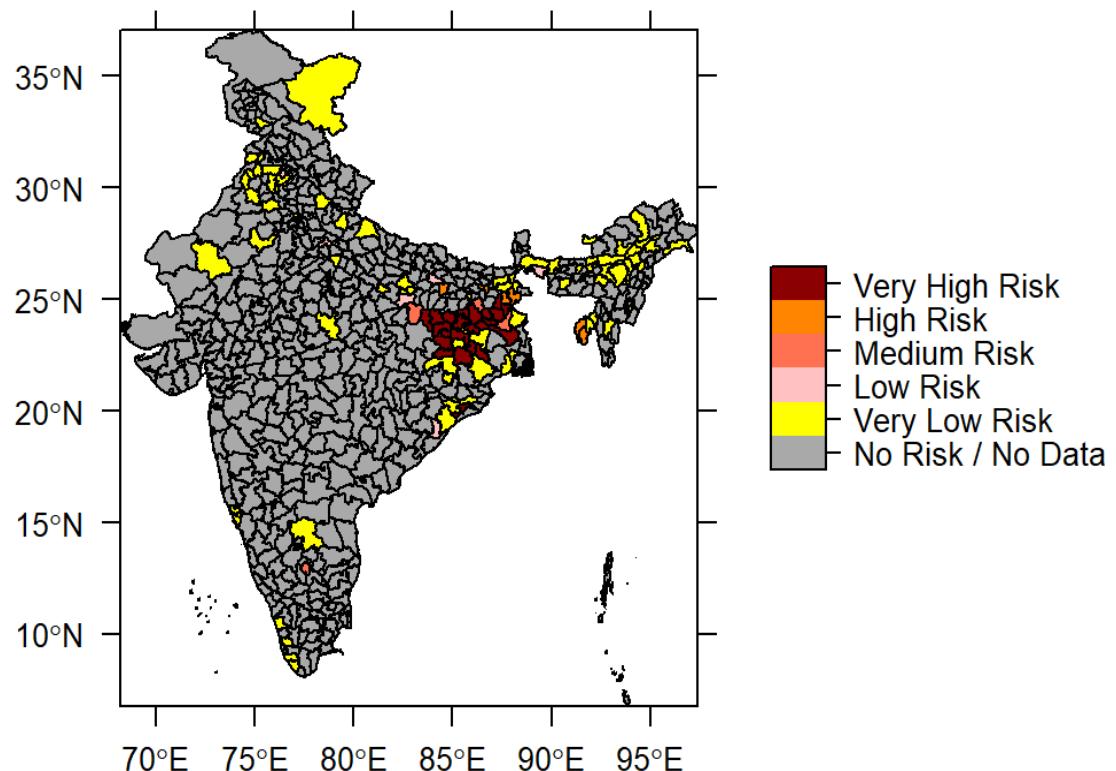

iv) Livestock Risk Prediction - Disease forewarning Maps

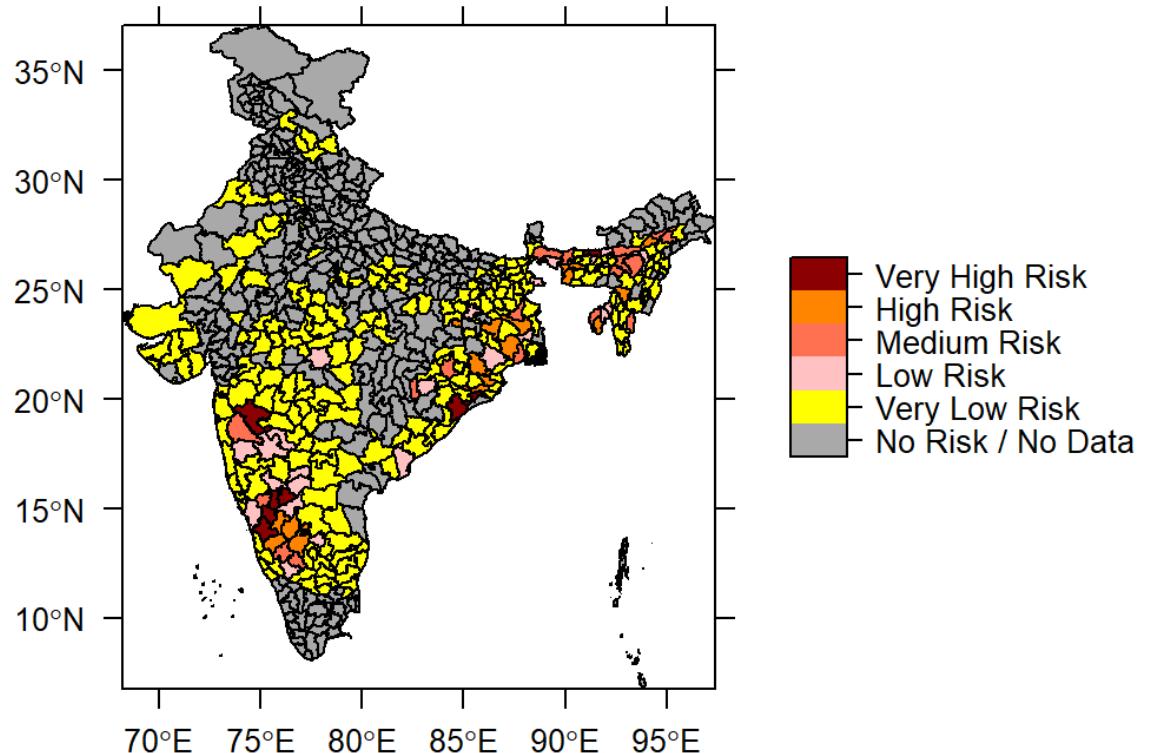

Risk Prediction of Anthrax for the month of November 2018

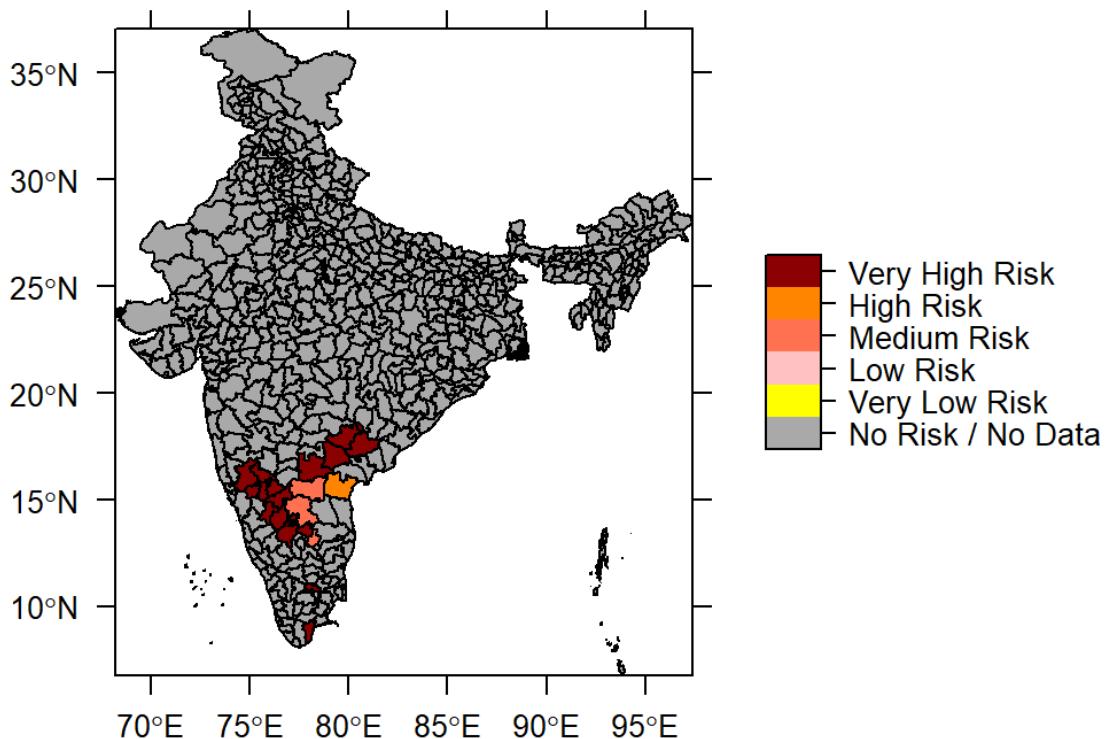

Risk Prediction of Babesiosis for the month of November 2018

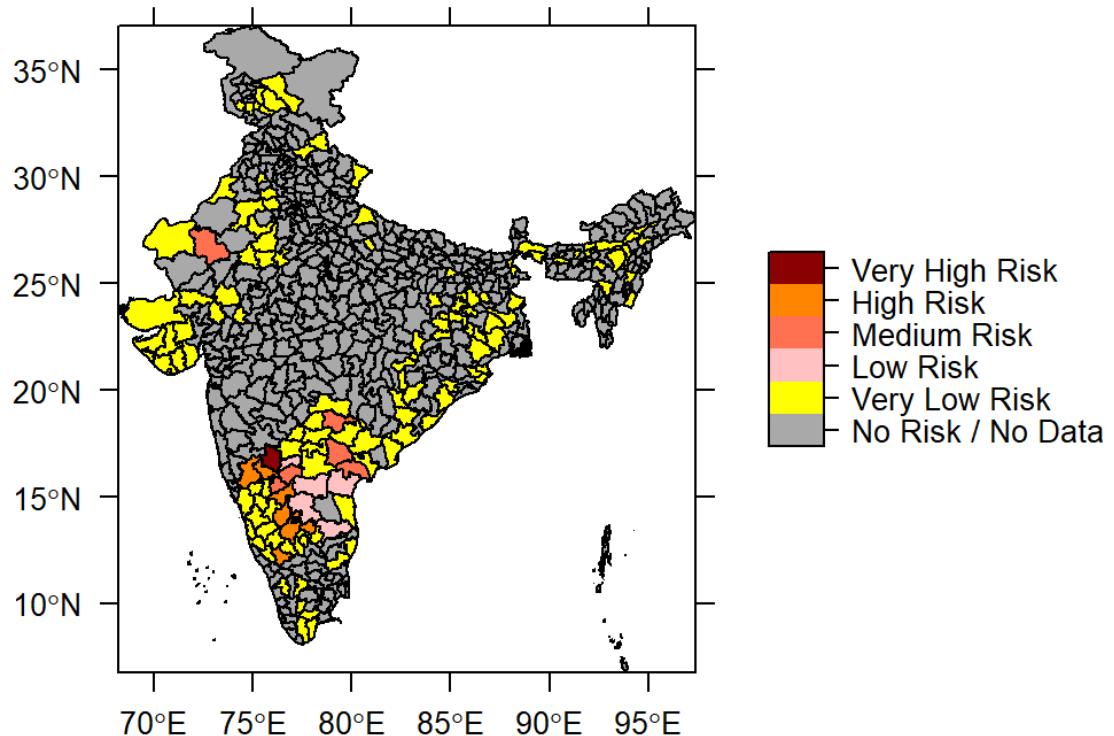

Risk Prediction of Black quarter for the month of November 2018

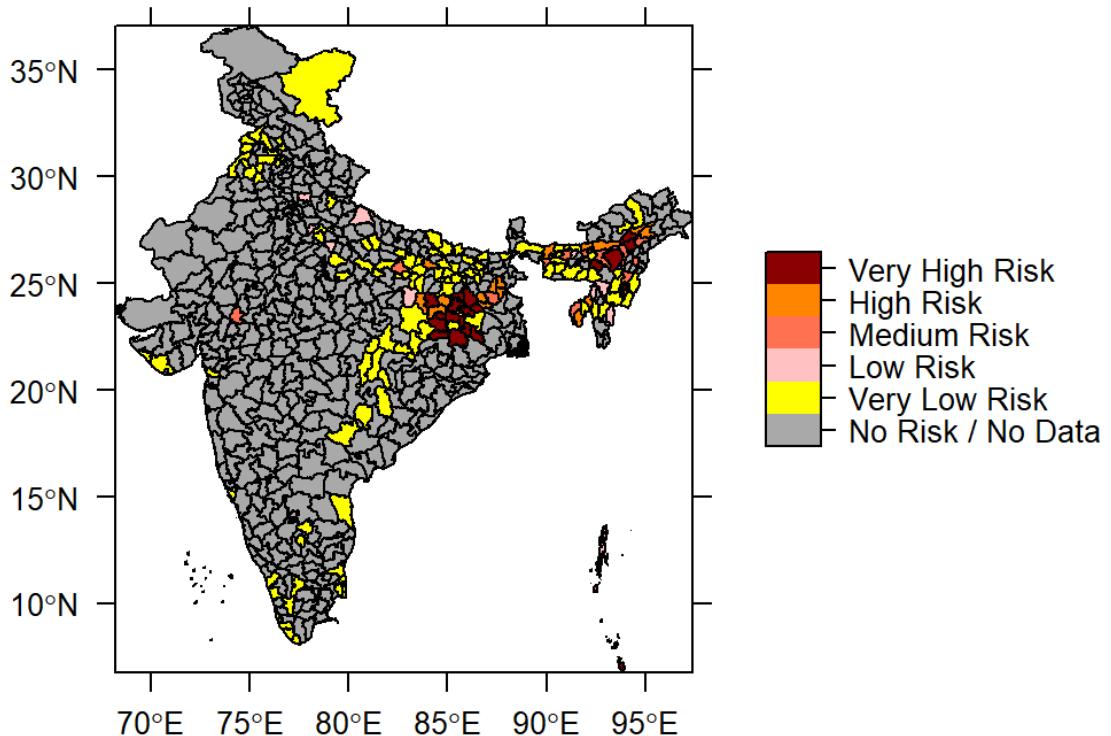

Risk Prediction of Bluetongue for the month of November 2018

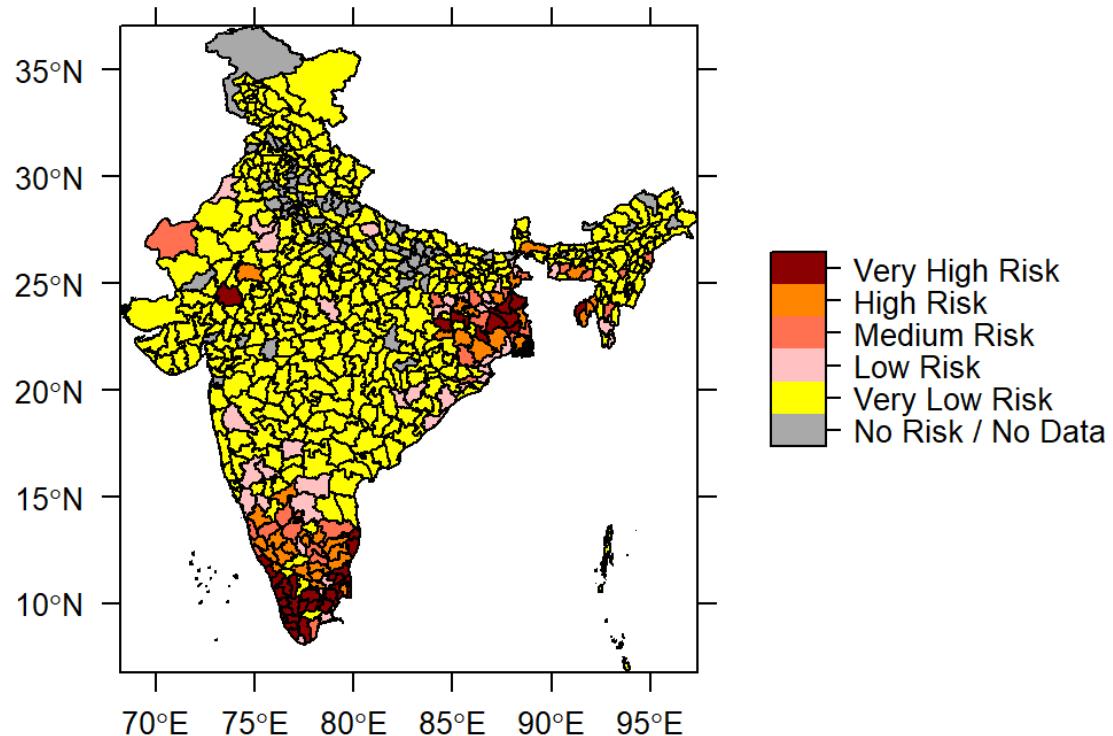

Risk Prediction of Enterotoxemia for the month of November 2018

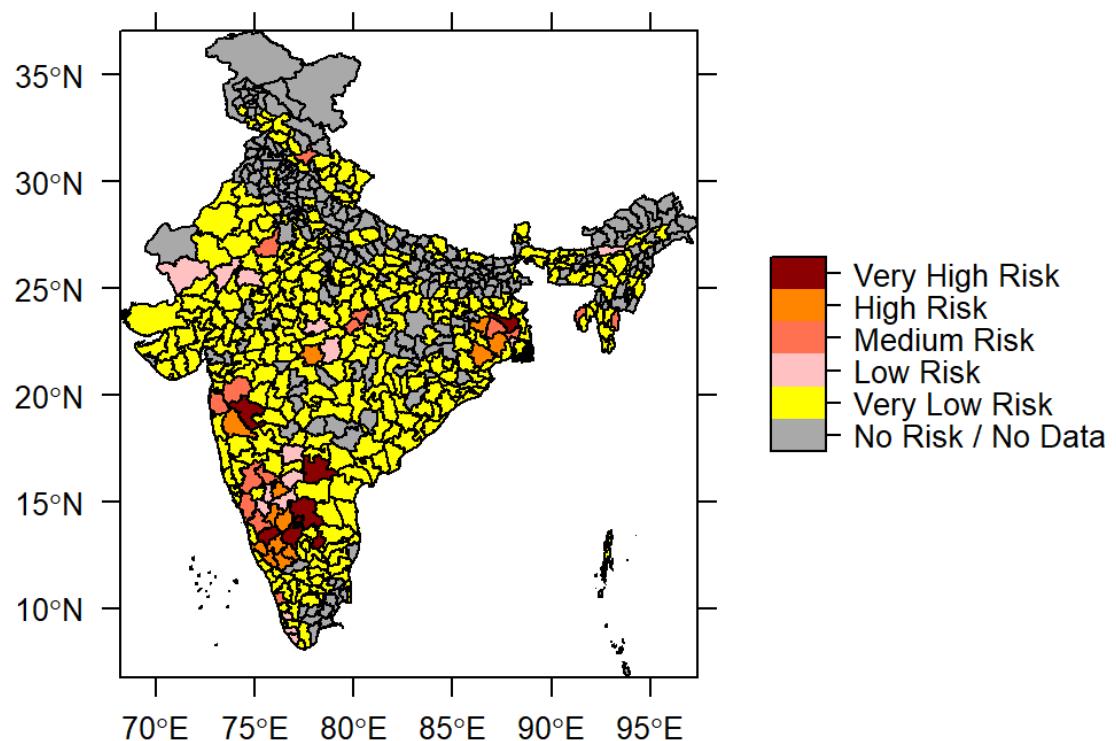

Risk Prediction of Fascioliasis for the month of November 2018

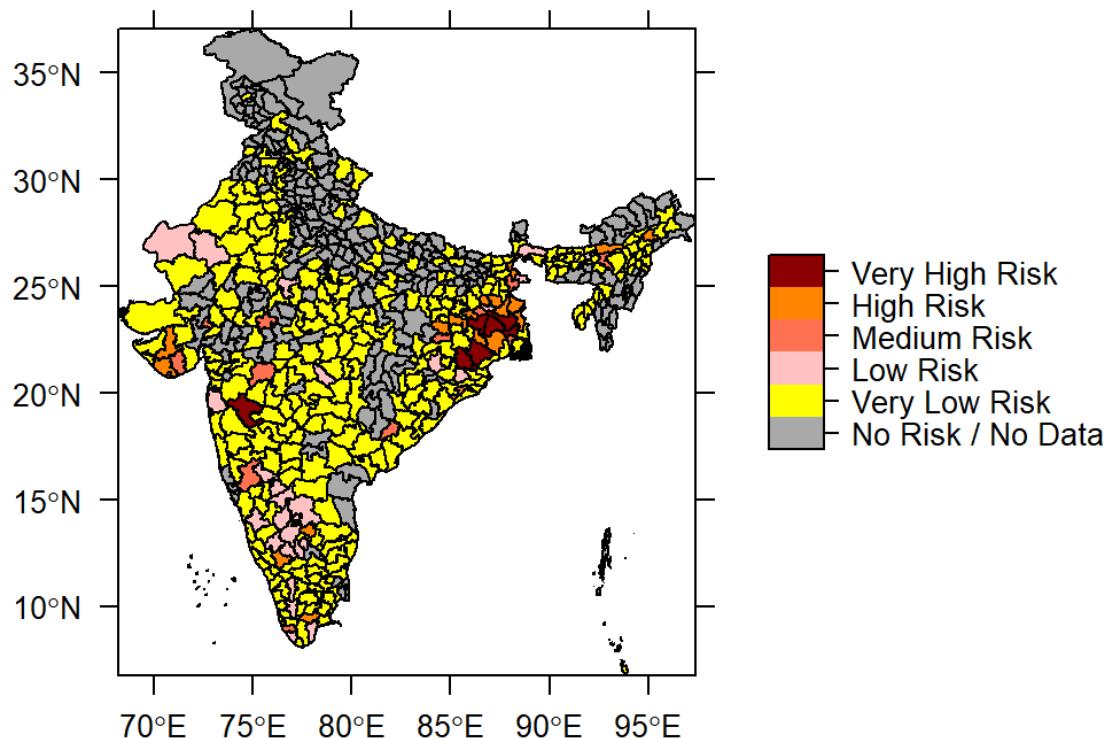

Risk Prediction of Foot and mouth disease for the month of November 2018

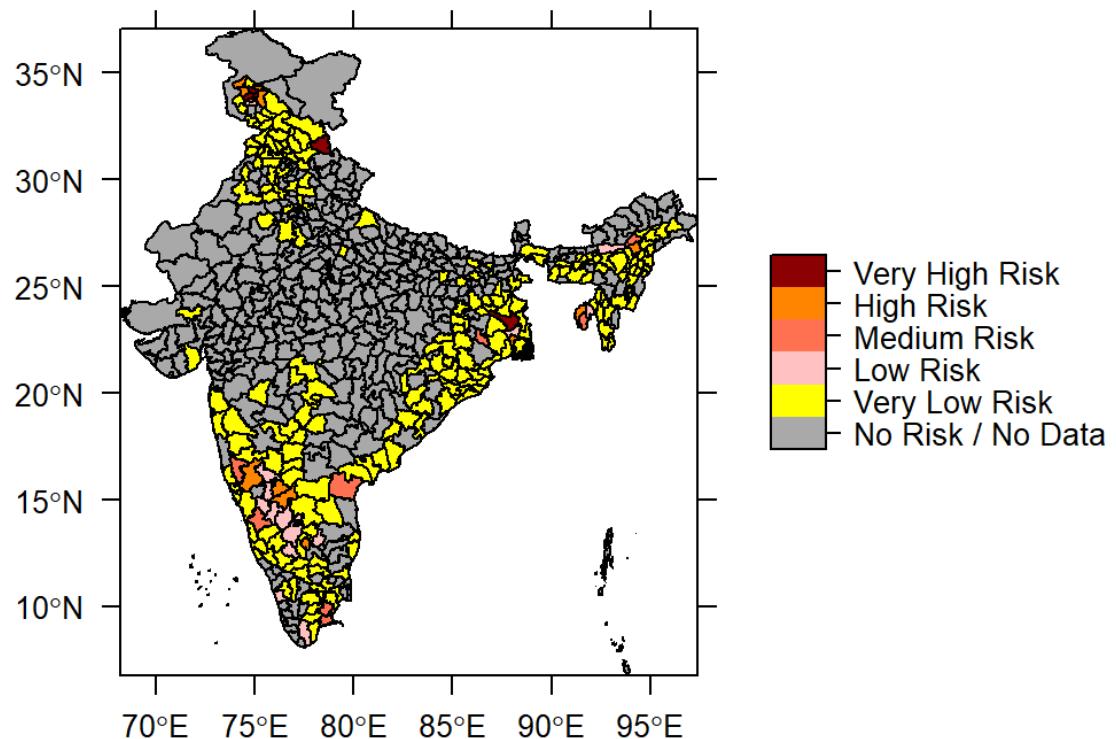

Risk Prediction of Haemorrhagic septicaemia for the month of November 2018

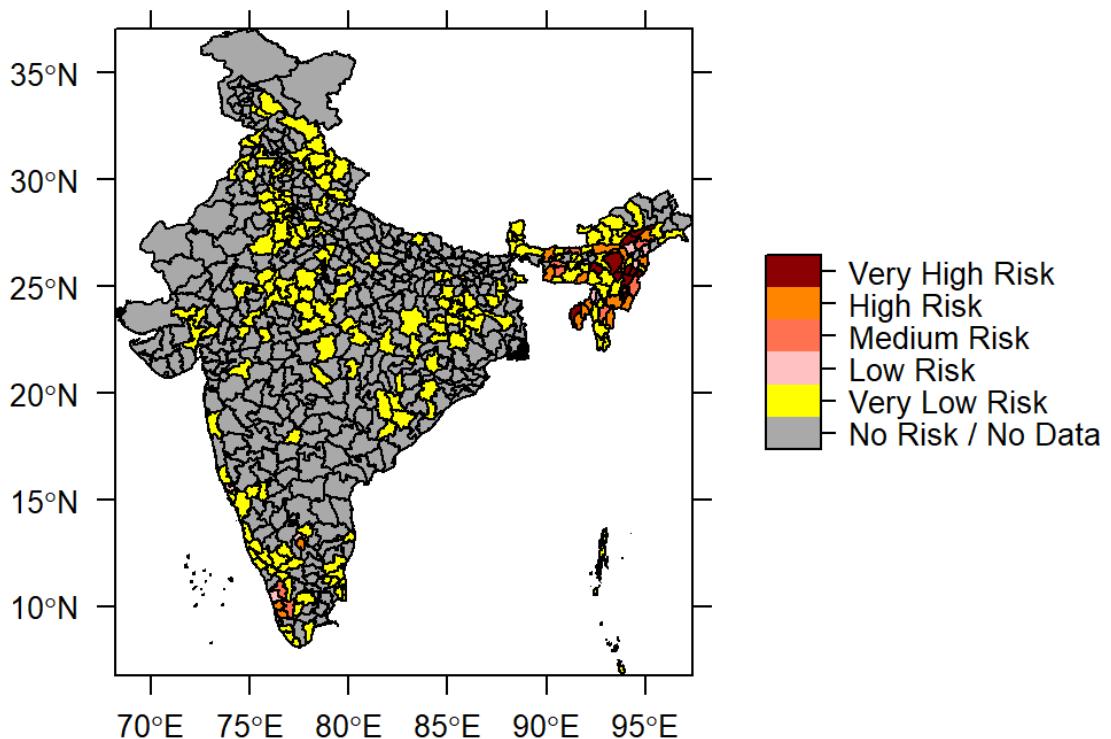

Risk Prediction of Peste des petits ruminants for the month of November 2018

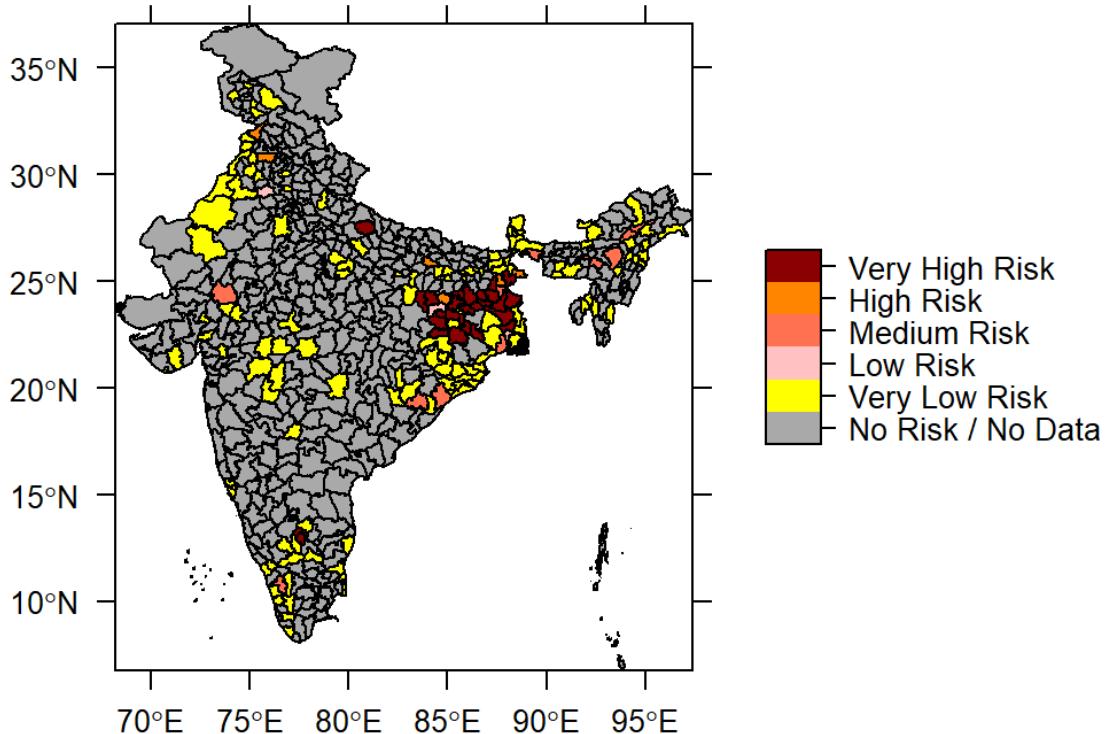

Risk Prediction of Sheep and Goat pox for the month of November 2018

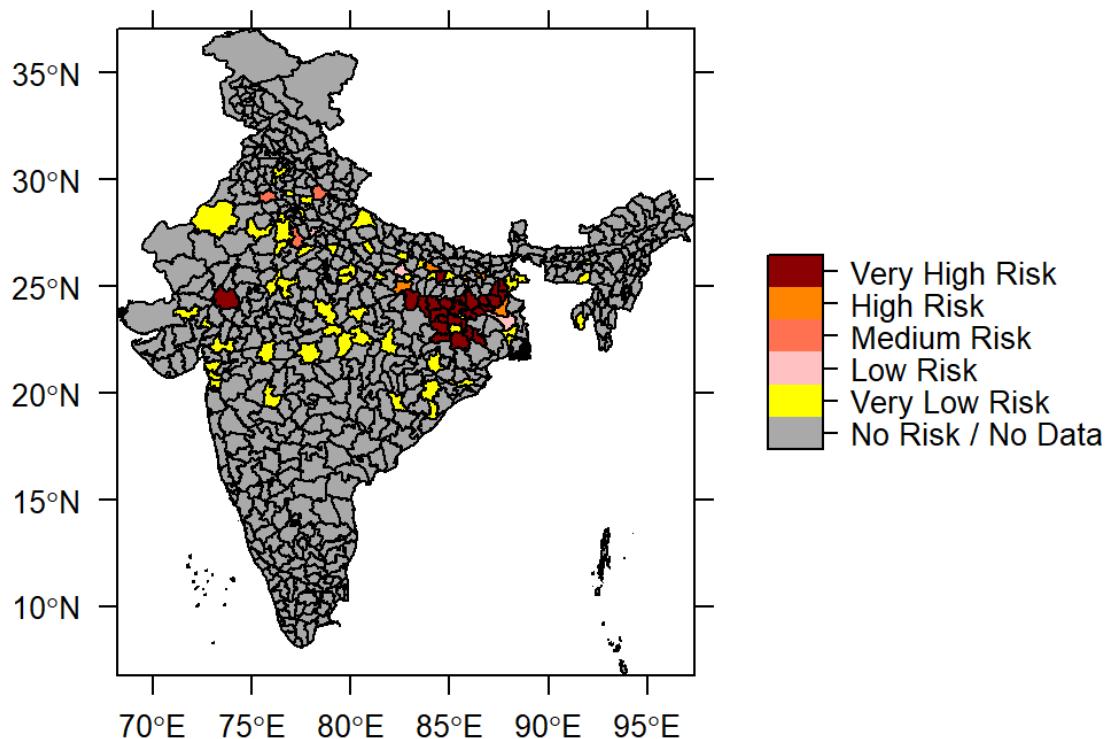

Risk Prediction of Swine fever for the month of November 2018

Risk Prediction of Theileriosis for the month of November 2018

Risk Prediction of Trypanosomiasis for the month of November 2018

5. Post Prediction Highlights

Pig diseases grip Mizoram: 3168 die in outbreak; more than 7000 taken ill

August 1, 2018 229 Views Comment Off

AIZAWL, August 1, 2018: As disease outbreak looms over the piggery sector of the state, it was reported that at least 3,168 pigs have died in Mizoram because of the outbreak of the porcine reproductive and respiratory syndrome (PRRS) and classical swine fever (CSF) since March this year.

State animal husbandry and veterinary deputy director Dr K. Lalrohlua (disease investigation) told **The Telegraph** that the figures were collected from all the eight districts of the state.

According to the records available with the department till July 28, 3,168 pigs and piglets have died due to PRRS and CSF and a majority of them were piglets, he said.

He said around 7,138 pigs and piglets have been taken ill till date due to the outbreak of PRRS and CSF.

According to Lalrohlua, the first case of PRRS was identified from Zokhawthar village on Mizoram-Myanmar border on March 17 and that of CSF was detected on April 13. He said the two diseases have affected the entire state and at least 105 villages in all the eight districts were affected.

Of the 620 blood samples tested during March to July, 349 pigs were found infected with PRRS, while 277 others tested positive for CSF, he added.

Although the outbreak is not fully controlled, it has waned, he said.

According to Lalrohlua, Aizawl district was the hardest hit with 1,923 pig deaths, followed by Serchhip district with 456 deaths.

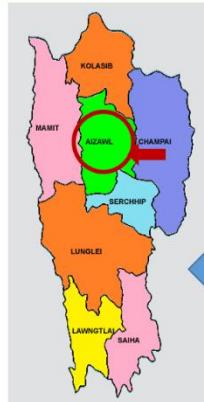

Altogether 363 pigs and piglets died in Lawngtlai district, 174 in Champai district, 158 in Siaha district, 71 in Kolasib district, 12 in Lunglei district and 11 in Mamit district.

According to the deputy director, the state government is making massive efforts to curb the outbreak.

He said the government has banned import of pigs from neighbouring states and countries and also prohibited inter-village movement of pigs. All pig farmers were also instructed to cull their ailing pigs and also bury the carcasses deep underground, he added.

Lalrohlua said the PRRS outbreak was somehow prevented in some districts due to the administration of CSF vaccine although there is no appropriate vaccine for PRRS.

The first phase of mass CSF vaccination will be launched in all parts of the state from August to October to prevent further outbreak, he added.

3168 pigs die in outbreak

Henry L. Khojol | Aug 01, 2018 00:00 IST

Aizawl: At least 3,168 pigs and piglets have died in Mizoram because of the outbreak of the porcine reproductive and respiratory syndrome (PRRS) and classical swine fever (CSF) since March this year.

State animal husbandry and veterinary deputy director Dr K. Lalrohlua (disease investigation) told **The Telegraph** that the figures were collected from all the eight districts of the state where there was an outbreak.

According to the records available with the department till July 28, 3,168 pigs and piglets have died due to PRRS and CSF and a majority of them were piglets, he said.

He said around 7,138 pigs and piglets have been taken ill till date due to the outbreak of PRRS and CSF.

Of the 620 blood samples tested during March to July, 349 pigs were found infected with PRRS, while 277 others tested positive for CSF, he added.

Although the outbreak is not fully controlled, it has waned, he said.

According to Lalrohlua, Aizawl district was the hardest hit with 1,923 pig deaths, followed by Serchhip district with 456 deaths.

Altogether 363 pigs and piglets died in Lawngtlai district, 174 in Champai district, 158 in Siaha district, 71 in Kolasib district, 12 in Lunglei district and 11 in Mamit district.

According to the deputy director, the state government is making massive efforts to curb the outbreak.

He said the government has banned import of pigs from neighbouring states and countries and also prohibited inter-village movement of pigs. All pig farmers were also instructed to cull their ailing pigs and also bury the carcasses deep underground, he added.

MIGRATION EFFECT

NIVEDI PREDICTIONS

| District of Mizoram | August month SF Prediction | July month SF Prediction | June month SF Prediction |
|---------------------|----------------------------|--------------------------|--------------------------|
| Aizawl | MR | LR | NR |
| Champai | HR | HR | HR |
| Kolasib | VLR | LR | VLR |
| Lunglei | VLR | LR | MR |
| Serchhip | LR | LR | VLR |

6. Launch of Mobile Android app. & link to download

Livestock forewarning application (LDF) can be downloaded following the link provided:http://www.nivedi.res.in/android_nadres/nivedi.apk. Further launch of LDF application was done, the news provided below.

The collage consists of several news articles from Indian media:

- INDIAN EXPRESS**: "Mobile app forewarning of livestock diseases launched". It features a photo of Radha Mohan Singh and a quote: "The app—Livestock Disease Forecasting (LDF)—has been developed by ICAR-Nivedi mobile application which can forewarn farmers about diseases affecting their livestock."
- krishijagran.com**: "Livestock Disease Forecasting – Mobile Application (LDF-Mobile App)". It includes a photo of Sharad Pawar and a quote: "This app will provide information about clinical samples for diagnosis in case of pregnancy, we must say."
- the pioneer**: "NEW APP TO FOREWARNING OF DISEASES IN FARM ANIMALS". It says: "To increase those dealing with farmers about the diseases that could affect their farm animals, the Indian Council of Agricultural Research (ICAR) and National Institute of Veterinary Epidemiology and Preventive Medicine (NIVEM) have developed a mobile application named LDF-Mobile App."
- Business Standard**: "Livestock Disease Forecasting – Mobile Application (LDF-Mobile App) launched". It features a photo of Radha Mohan Singh and a quote: "The app will provide information about clinical samples for diagnosis in case of pregnancy, we must say."
- Dairy Times**: "Shri Radha Mohan Singh launches Livestock Disease Forecasting – Mobile Application (LDF-Mobile App)". It includes a photo of Radha Mohan Singh and a quote: "The app will provide timely information about clinical samples for diagnosis in case of pregnancy, we must say."

At the bottom left, there is a screenshot of a Twitter post from Radha Mohan Singh (@RadhamohanIIP) dated Dec 27, 2017, which reads: "Today, I launched Livestock Disease Forecasting - Mobile App (#LDFM), which uses Monthly Bulletin system to send out early warnings." Below the post is a photo of a meeting at ICAR, Agriculture (India), Nivedi.
